Appendix C: Root Operation Definitions	1293

Introduction ICD-10-PCS Mappings

Ø9HDØSZ Insertion other hearing device rt inner ear, open apprch
 AND
 Ø9PDØSZ Removal hearing device right inner ear, open apprch

#### **Conventions Used in ICD-10-PCS Mappings**

To use this mapping manual appropriately, the user must first understand the format, organization, and symbols in the guide. The codes and mapping relationships are based on the most recently updated GEM mapping file released in July 2012. All codes and code titles are based on the ICD-9-CM codes effective October 1, 2012, through September 30, 2013, and the ICD-10-PCS draft version 2013.

#### **Format**

The manual is formatted in two columns. The first column contains the ICD-9-CM procedure codes in numerical order with an abbreviated code title. The second column contains the ICD-10-PCS procedure code(s) with abbreviated code titles that map to the ICD-9-CM codes using both forward and backward mapping. Every other row is shaded to make it easier to track across the row.

#### **Organization**

The manual is organized into the same chapters as the ICD-9-CM code book. Dictionary headings at the top and outside edge of each page provide the name of the chapter and the range of ICD-9-CM codes contained on that page.

#### **Code titles**

Both ICD-9-CM and ICD-10-PCS codes are provided with abbreviated code titles, which are necessary to accommodate the format of the manual. An abbreviation key is provided in appendix B. The ICD-10-PCS code titles are the official 60-character abbreviations released by the Centers for Medicare and Medicaid Services (CMS).

#### **Symbols and Conventions**

The following symbols are used in the manual:

#### **Rule Lines**

Rule lines are used in these tables to separate groups of root operations when more than one root operation may be selected to satisfy the meaning of the ICD-9-CM code.

#### Example:

	ICD-9-CN	l	ICD-10-CM	
•	35.11	OPEN HRT VALVULPLSTY AORTIC VALV WITHOUT REPLCMT	Ø27FØDZ	DIL AORTC VALV W/RX-ELUT INTRALUM DEVC OPN APPR DILAT AORTIC VALVE W/INTRALUM DEVICE OPEN APPRCH DILATION OF AORTIC VALVE OPEN APPROACH
			Ø2NFØZZ	RELEASE AORTIC VALVE OPEN APPROACH
			Ø2QFØZZ	REPAIR AORTIC VALVE OPEN APPROACH

**Note:** Since the PCS codes are arranged alphanumerically and the root operation is represented by the third character, the same root operation may appear more than once. For example, the mapping alternative choices for code Ø6.Ø9 Other incision of thyroid field, includes the drainage of the thyroid and parathyroid, which are body parts included in the body system G Endocrine. Drainage of the neck, which is included in the body system W Anatomical Regions, General, is also included in the mapping alternatives. Therefore the root operation Drainage appears in two places in the table. Be sure to review all alternatives before making a final code(s) selection.

Rule lines are also used in scenarios to separate the groups from which a selection must be made.

#### Example:

ICD-9-C	:M	ICD-10-CM
35.81	TOTAL REPAIR OF TETRALOGY OF FALLOT	<b>Ø2RMØJZ</b> REPLACE VENTRICULAR SEPTM SYNTH SUBST OPN APPR
		Ø2RPØJZ       REPLACEMENT PULM TRUNK W/SYNTH SUBST OPEN APPR       Ø1         Ø2RQØJZ       REPLACEMENT RT PULM ART W/SYNTH SUBST OPEN APPR       Ø1         Ø2RRØJZ       REPLACEMENT LT PULM ART W/SYNTH SUBST OPEN APPR       Ø1
		<b>Ø2BKØZZ</b> EXCISION OF RIGHT VENTRICLE OPEN APPROACH
		<b>Ø2NHØZZ</b> RELEASE PULMONARY VALVE OPEN APPROACH

© 2015 Optum360, LLC

ICD-10-PCS Mappings Introduction

In the above example, to code the total repair of the tetralogy of Fallot in ICD-10-PCS, the coder must select a code from each of the four groupings. First, select 02RM0JZ for the replacement of the ventricular septum. Second, select the appropriate code from the second group to identify the specific pulmonary trunk, pulmonary artery right or left. Third, select the excision of the right ventricle, and fourth, select the release of the pulmonary valve. This means that it takes four ICD-10-PCS codes to fully reflect the meaning of ICD-9-CM code 35.81.

#### European zero

To preserve consistency with the diagnostic ICD-1Ø-CM manual, this manual uses the European zero (with a diagonal line through it). This differentiates all zeroes from the letter O.

#### See Appendix A

This flag symbol designates those code mapping relationships that require multiple ICD-9-CM codes to satisfy the clinical concepts described in one ICD-10-PCS code in the backward mapping.

#### **Example**

ICD-9-CM	ICD-10-CM
33.51 UNILATERAL	LUNG TRANSPLANTATION ØBYCØZØ TRANSPLANT RT UPPER LUNG LOBE ALLOGENEIC OPEN

Appendix A provides all the ICD-9-CM code combinations required to fully describe the meaning of ØBYCØZØ.

ØBYCØZØ ØØ.91 and 33.51; ØØ.92 and 33.51; ØØ.93 and 33.51

Since the seventh character value of Ø is defined as "allogeneic" transplant, the tissue type may be the same individual, different individual, or cadaver of the same species. In this case ICD-1Ø-PCS does not contain the same clinical specificity as does ICD-9-CM. To reflect all character values represented by code ØBYCØZØ, code 33.51 must be paired with one of the listed adjunct codes that describe the type of tissue donor.

#### Scenarios: Use of "And" and "Or" Operators:

GEM scenarios are the combinations of ICD-1Ø-PCS codes required to satisfy the meaning of an ICD-9-CM code. The user must take special note of the "and" and "or" operators found throughout the mapping guide. Whenever these operators appear, they are shaded in red or blue as an alert that additional selection logic must be applied.

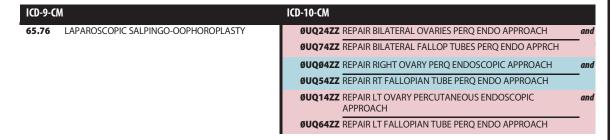

#### Example

ICD-9-C	М	ICD-10-CM
21.03	CONTROL OF EPISTAXIS BY CAUTERIZATION	3EØ9XGC INTRODUCTION OTH TX SUBSTANCE NOSE EXT APPROACH and
		2Y41X5Z PACKING OF NASAL USING PACKING MATERIAL

The equivalent clinical concept of the ICD-9-CM code for epistaxis control by cauterization requires both ICD-10-PCS codes 3E09XGC and 2Y41X5Z to be assigned.

Some ICD-9-CM procedure codes are fully reflected by more than one combination of ICD-10-PCS codes. That is, more than one scenario is provided and selection is based on documentation. If the mapping provide more than one scenario, each distinct scenario is shaded in red or blue.

#### Example:
