The physician performs complex, layered suturing of torn, crushed, or deeply lacerated tissue. The physician debrides the wound by removing foreign material or damaged tissue. Wound irrigation is performed with an antimicrobial solution to decontaminate and cleanse the wound. The physician may trim skin margins to allow for proper closure. The wound is closed in layers. The physician may perform scar revision, which creates a complex defect requiring repair. Stents or retention sutures may also be used in complex repair. Reconstructive procedures, such as local flaps, may be required and are reported separately. Report 13150 for wounds 1 cm or less; 13151 for 1.1 cm to 2.5 cm; 13152 for 2.6 cm to 7.5 cm; and 13153 for each additional 5 cm or less.</p> <p>Notes</p> <p>Section Notes - 13100-13160 Suturing of Complicated Wounds - (13100-13160) Suturing of Complicated Wounds</p> <p>INCLUDES: Creation of a limited defect for repair</p> <p>Debridement complicated wounds/avulsions</p> <p>More complicated than layered closure</p>	<p>Color Codes</p> <ul style="list-style-type: none"> A2 ASC Payment Indicator - A2 Surgical procedure on ASC list in CY 2007; payment based on OPFS relative payment weight.
